

The Technology Leader

What Separates Heller Industries From The Competition

- **New Models** provide appropriate configuration and pricing to satisfy every Customer application. (1088, 1706, 1707, 1808, 1809, 1812, 1912, 1913)
- **New Heat Module Design** maximizes Volume and Velocity for Highest Level of Convected Heat Transfer in the Industry. Gives lowest DT's—even on heavily loaded PCB's. (Encourage a "Bake Off" vs. the competitors)
- **Low Mass Coil Heaters** give instant response to load and profile changes for superior repeatability. (Others typically use High mass panels with slower response – resulting in longer changeover times and decreased yields.)
- **Reduced Footprint** designs provide additional floorspace for inclusion of Automatic Optical Inspection (AOI) systems without having to re-layout production lines. ("S" models average 33" shorter than competitors' comparable systems with same number of heated zones and heated length)
- **Award Winning Flux Separation System** virtually eliminates maintenance. With New "Self-Cleaning Mode" Lines processing 2KG+ of paste per day can go for months without operator intervention. Waterless – Gen 5 and Water Cooled – Gen 9 for ultra fast cooling rates.
- **Industry Leader in Lead-Free Research and Development**—Partnering with Auburn University, Rochester Institute of Technology, California Polytechnic, Sony, Flextronics and Soldering Technology International to pioneer Lead-free solutions and drive the technology.
- **Lowest Nitrogen and Electrical consumption** for lowest Cost of Ownership
- **Lifetime Warranty** On Heaters And 350° C Blowers
- **Global Sales And Service** group ensures uniform pricing and interchangeability from site to site
- **KIC and ECD Profiling Software** for optimal profiling capability
